Projects

Food Restaurant - Python

<https://github.com/bharath2904/Restaurant/blob/main/Restaurant.py>

This Python project simulates an interactive burger and drink ordering system for a restaurant.

- This Python project simulates an interactive ordering system for a food restaurant specializing in burgers and drinks. Users are greeted with a welcoming message and prompted to select either a vegetarian or non-vegetarian burger option. Depending on their choice, they can further specify their burger preference from a predefined menu

Food Restaurant - SQL

https://github.com/bharath2904/Restaurant/blob/main/Burger_drink.sql

SQL to populate and manage tables for burgers and drinks, ensuring a ready-to-use menu and efficient order management.

- The burger and drinks tables are populated with predefined options using insert statements, ensuring a ready-to-use menu for customers. This database structure supports efficient management of menu items and customer orders, facilitating a streamlined restaurant operation

Portfolio

<https://github.com/bharath2904/Portfolio.git>

Developed interactive, user-friendly web applications using React.js for seamless and dynamic user experiences.

- The portfolio website is built using HTML, CSS, JavaScript, and React.js. It provides a comprehensive showcase of your work and skills. HTML forms the foundational structure, creating sections such as a home page, projects, an about me section, and a contact form.
